PROFESSIONAL SUMMARY

B.E. Computer Science and Engineering student specializing in Artificial Intelligence and Machine Learning at Sathyabama Institute of Science and Technology, Chennai (expected 2028; CGPA 8.0/10). Intermediate-level skills in Python, machine learning, deep learning, React, FastAPI/API integration, and SQL/databases. Project experience building predictive ML pipelines and full-stack AI applications. Seeking an AI/ML internship with opportunities to contribute to applied machine learning and AI-enabled software.

EDUCATION

B.E. Computer Science and Engineering — Artificial Intelligence & Machine Learning
Sathyabama Institute of Science and Technology, Chennai | Expected 2028 | CGPA: 8.0/10

TECHNICAL SKILLS

Programming: Python, JavaScript/TypeScript, C++, SQL
Machine Learning: scikit-learn, regression, classification, model evaluation, feature engineering
Deep Learning & AI: TensorFlow, Keras, NLP, computer vision, object detection, landmark detection
Generative & Agentic AI: Agentic AI, AI agents, Large Language Models (LLMs), prompt engineering, AI automation
Data: Pandas, NumPy, Matplotlib, data cleaning, time-series feature engineering
Web & APIs: React, FastAPI, REST APIs, Pydantic, SQLAlchemy
Databases & Tools: SQLite, PostgreSQL, Git, GitHub

EXPERIENCE

Artificial Intelligence Intern — Internship Studio (iSTUDIO)
Jul 6, 2026 – Oct 9, 2026
- Completed an AI internship with training and hands-on AI/ML assignments.
- Completed the Project Panopticon capstone assignment on intelligent exam proctoring, covering asynchronous telemetry alignment, missing-data handling, rolling-window features, and probability-based classification with precision-focused thresholding.

Agentic AI Intern — NeubAltics Research Hub
Aug 2026 – Sep 2026 | 50-hour Agentic AI Certification Program
- Completed a 50-hour internship under the Agentic AI Certification Program, contributing to program tasks and practical assignments.
- Developed a project demonstrating applied Agentic AI knowledge, strengthening skills in AI agents, LLMs, prompt engineering, and AI automation.
- Received an Internship Completion Certificate (13 Oct 2026) recognizing enthusiasm, dedication, and consistent effort.

AI Internship / Industrial AI Program — 1Stop.ai / Personifwy
Jul 1, 2025 – Sep 1, 2025
- Completed an industrial AI program and projects in text classification, object detection, and landmark detection using TensorFlow.
- Received AI program participation, project completion, and internship certificates, as reported by the user.

SELECTED PROJECTS

Traffic Flow Prediction for Smart Cities
Technologies: Python, Pandas, scikit-learn, XGBoost, FastAPI, React, SQLite
- Built an end-to-end traffic-volume prediction application using historical traffic, weather, temporal, and calendar features.
- Implemented data cleaning, feature engineering, and a chronological 80:20 train/test split to reduce time-series leakage.
- Project-reported evaluation on 9,638 out-of-sample records: XGBoost MAE 255.69 vehicles/hour and R^2 0.9499; compared Linear Regression, Decision Tree, Random Forest, and XGBoost.
- Integrated prediction, analytics, and prediction history through FastAPI and a React dashboard.

AI CareerGuide — Career Guidance & Course Recommendation Platform
Technologies: Python, FastAPI, React, TypeScript, SQLAlchemy, PostgreSQL/SQLite
- Built a full-stack career guidance platform with career matching, skill-gap analysis, learning roadmaps, course recommendations, resume analysis, job-description matching, and progress tracking.
- Implemented configurable rule-based career scoring (skills 40%, interests 20%, education 15%, projects 15%, experience 10%) and gap-weighted course ranking.
- Added a profile-aware CareerAI assistant using rule-based intent handling, with optional OpenAI-compatible LLM integration.
- Project documentation reports 61 backend tests and a production frontend build.

HAPTIWAY — Wearable Navigation Aid
Technologies: ESP32, HC-SR04 ultrasonic sensors, haptic feedback, embedded systems
- Designed a wearable obstacle-awareness prototype using an ESP32 and ultrasonic sensors.
- Integrated vibration-motor feedback to provide obstacle alerts for visually impaired users.

Project Panopticon — Intelligent Exam Proctoring (Internship Capstone)
Technologies: Python, Pandas, scikit-learn
- Completed a capstone assignment focused on classifying suspicious exam behaviour from asynchronous video telemetry and system events.
- Assignment topics included time alignment, missing sensor data handling, rolling-window features, and probability-threshold adjustment to prioritize precision and reduce false accusations.

SELECTED CERTIFICATIONS

- Artificial Intelligence Internship & Training — Internship Studio (iSTUDIO), Oct 2026
- Artificial Intelligence Internship; AI Project Completion; AI Program Participation — 1Stop.ai / Personifwy, Sep 2025
- Developing Generative Artificial Intelligence Solutions — AWS Training & Certification, Jul 2026
- Developing Machine Learning Solutions — AWS Training & Certification, Jul 2026
- Fundamentals of Machine Learning and Artificial Intelligence — AWS Training & Certification, Jul 2026
- Introduction to Agentic AI on AWS — AWS Training & Certification, Jul 2026
- Foundations of Prompt Engineering — AWS Training & Certification, Jul 2026
- Python for Data Science — NPTEL, Jan–Feb 2025
- Machine Learning with MATLAB; Machine Learning Onramp — MathWorks, 2025

Additional credentials: AWS Technical Essentials; Introduction to Generative AI — Art of the Possible; Introduction to Machine Learning — Art of the Possible; AI for Business Professionals and Critical Thinking in the AI Era (HP LIFE); Data Analysis in MATLAB and other MathWorks courses; Forage GenAI/Data Science job simulations; Cisco Networking Academy courses; Python for Data Science (RF Skilling Academy); C for Beginners (Great Learning); Future of Gaming in AI (Sathyabama).
